

## Breeze Automotive EzeStreet™ Streetable Stock Car Kit

### Development Update May 16, 2008:

Today, we are pleased to introduce our new stock car chassis at the Carlisle Kit Car Show in Carlisle, PA. This chassis, built by Ortec Racing of Simpsonville SC, with Breeze designed opening roll cage doors, is state of the art in stock car design and fabrication, and will be the core of the EzeStreet Streetable Stock Car Kit!

EzeStreet will not be a stock car replica, rather it will be a real race car not only in look and feel but in the quality of components and construction details, with modifications and additions desirable for street use.

Streetable features planned are:

- Opening Doors
- Headlights, Taillights, Turn Signals, Backup Lights, Dome Light
- Mufflers
- Fuel Level Gauge
- Windshield Wipers
- Rearview and side view mirrors
- Adjustable Driver Seat
- Passenger Seat
- Keyed Ignition Switch
- DOT street tires
- License plate brackets
- Front Wheel Splash Shields
- Clutch type differential

Now that we have completed the chassis design with opening doors, we will be moving on to the design of the body mounting structure and crush panels. Our goal is to develop a body and body mounting kit that minimizes or even eliminates the need for custom fabrication. We will also be specifying the fuel system, brakes, shocks, cooling system and rear-end, seats, dash and gauges and exhaust systems, most of which will drop ship directly from the race-car parts manufacturer to the customer.

We plan to offer the kit in two levels of completeness:

- ❑ The EzeStreet™ kit less engine and transmission will be capable of accepting most any customer supplied engine and transmission combination.
  
- ❑ The EzeStreet™ complete kit will include a 340HP 302 Ford and a T-5 transmission.

For those who want a turnkey car, Breeze will develop a network of builders who will build cars starting with either the EzeStreet™ less engine and transmission or the EzeStreet™ Complete kit. Want more power? Need to meet 2008 Emissions requirements to register in your state? How about an LS7?

We are excited to leverage our experience and success in the kit car industry by introducing this stock car kit, while continuing to support and expand our existing product line. Stock car racing is the most popular sport in America, and we believe our streetable stock car kit will appeal to a wide range of builders.
